## INTRODUCTION

This report is about our progress during the week. There will be provided information about obstacles we met and about mistakes, plans and works were done in that period of time.

We have started doing a landing page for every product and we have done its front end. Landing page is needed for better understanding routing in golang and for making comment and rating easier. By adding `{{.Product_id}}` we pass product's id to the function where it will be routed. After that, we have a little problem. By adding `/{{.Product_id}}` to the link, our html is not working right. And to solve this problem we tried to use gorilla/mux. But it did not help us. Now we are solving this problem. After that we will do the other 2 points of the midterm task 2. Our code shows the price of the product not only in tenge, but in other values too. In rubles, in dollars, etc.

## PROCEDURE

1. Making the front end.
2. Making the routing.

## RESULTS

We have started the rating and commenting process. For the next report, we are going to complete these parts .
