## INTRODUCTION

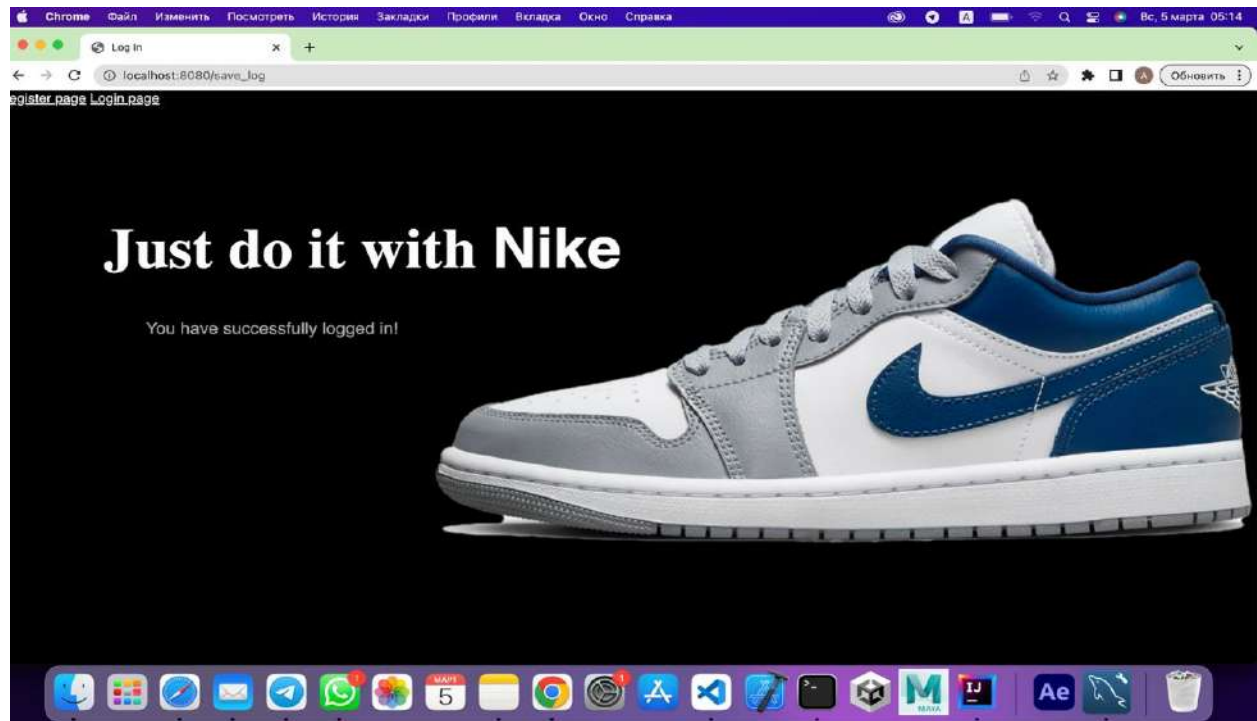

This report is about our progress during the week. There will be provided information about obstacles we met and about mistakes, plans and works were done in that period of time.

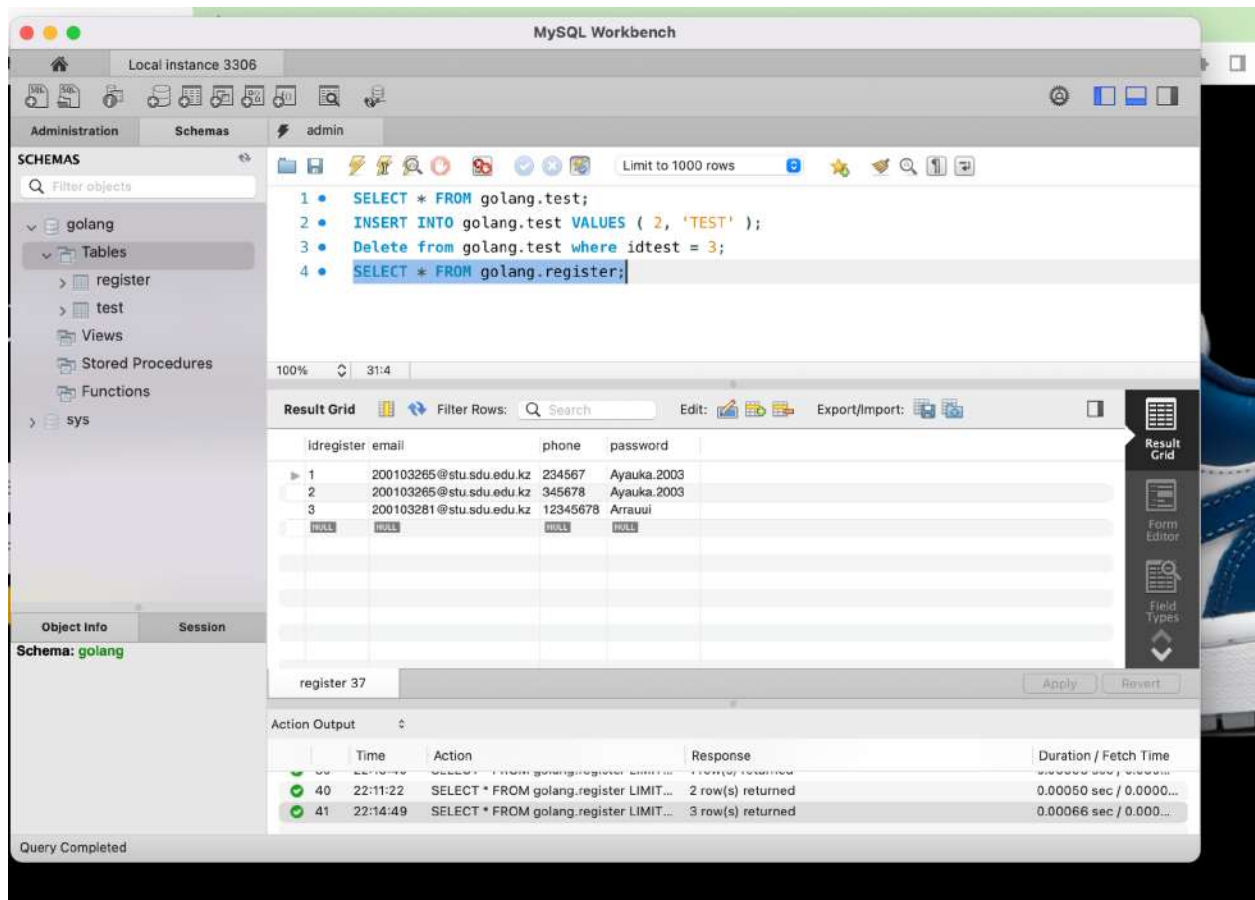

We have finished the Authorization process by which a server determines if the client has permission to use a resource . It checks data from the register table in the database which collects information about the client to have access to its own account. If a client enters wrong information it will show a hint about error . If data was entered correctly it will be sent to the main page (to its own account) . In the next report we are planning to complete the user interface and add all required tables to the database of the main page .

During the process by practicing we developed our knowledge about the GO and Backend . We realized the principles of teamwork .

## PROCEDURE

1. Writing the code by using various statements
2. Making required query to get users information
3. Completing the authorization page (process)

## RESULTS

We have finished the registration and authorization page by making the queries and statements .
