## INTRODUCTION

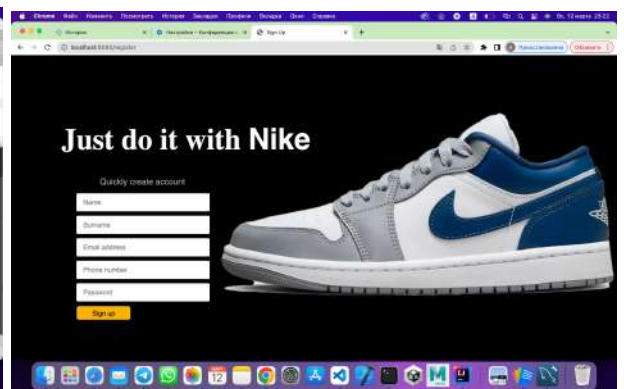

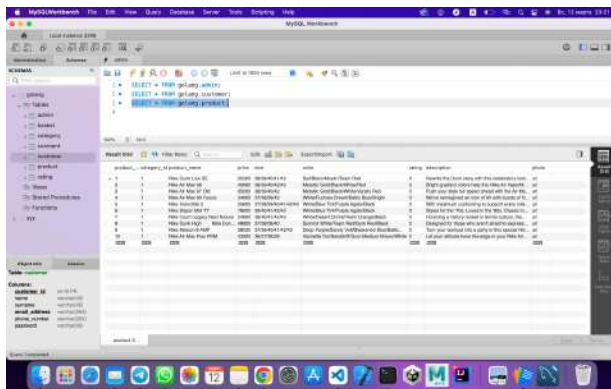

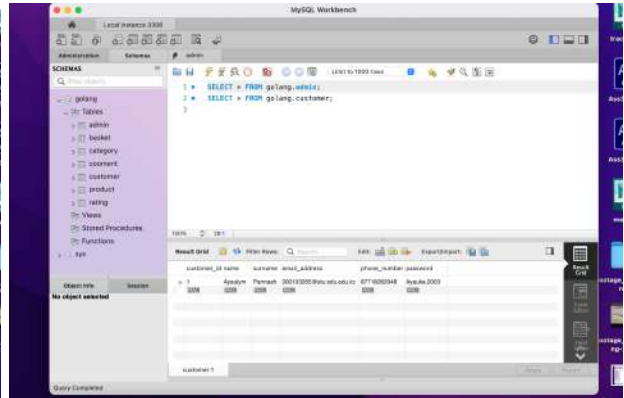

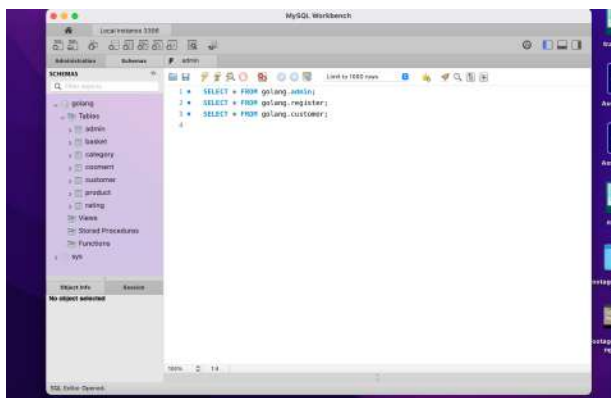

This report is about our progress during the week. There will be provided information about obstacles we met and about mistakes, plans and works were done in that period of time.

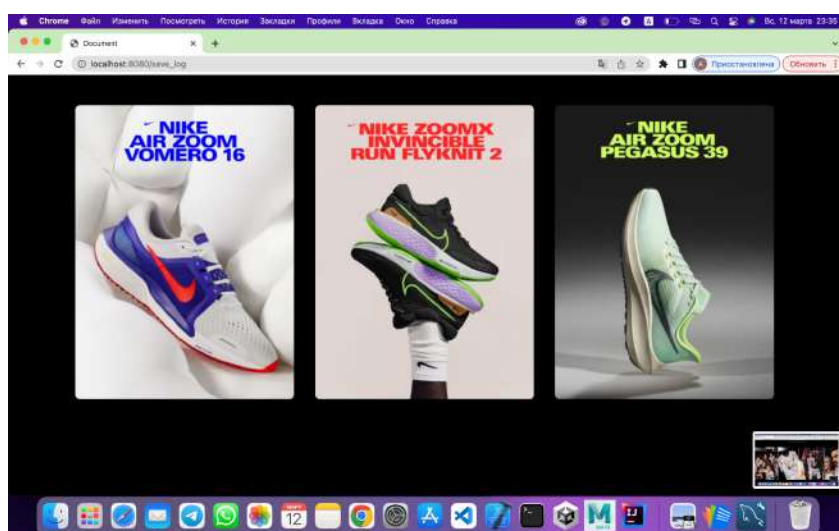

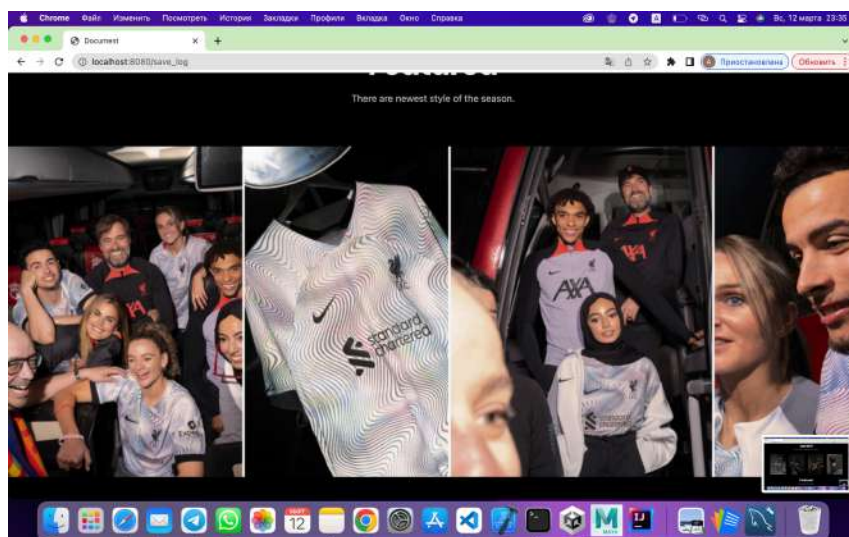

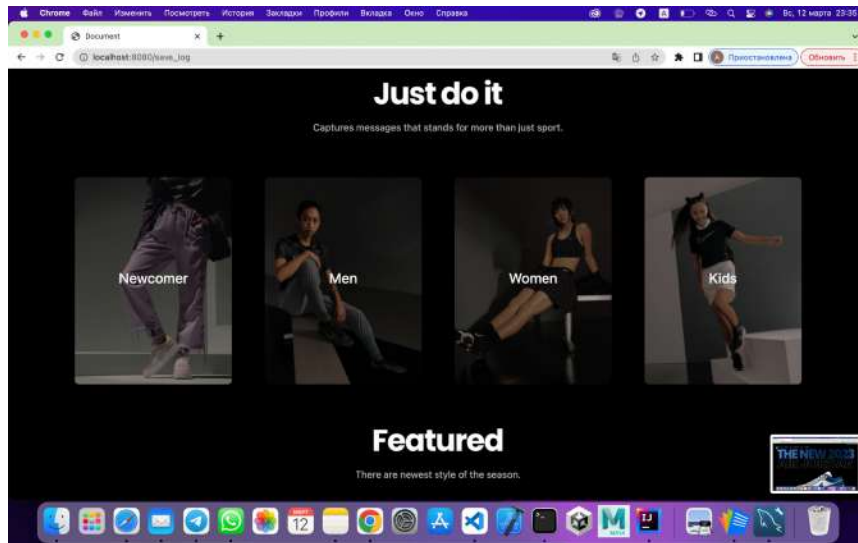

This week we created new tables in our database. They contain information of all tables from ERD to have a full characteristics of the e-commerce store. After this, adding new data of the products had been done. Table named products have such columns like name, id, price, rating, category, color, size, description etc.

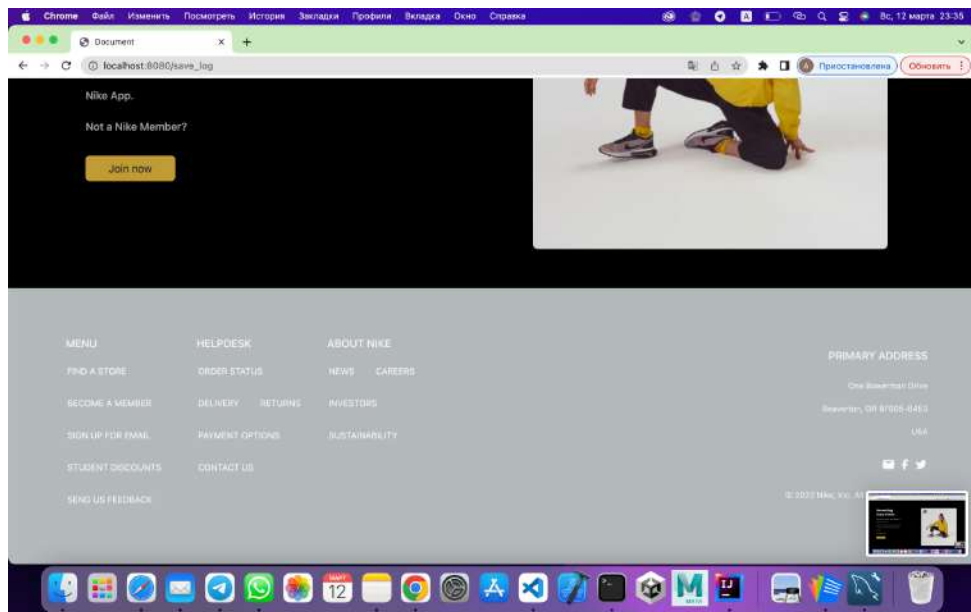

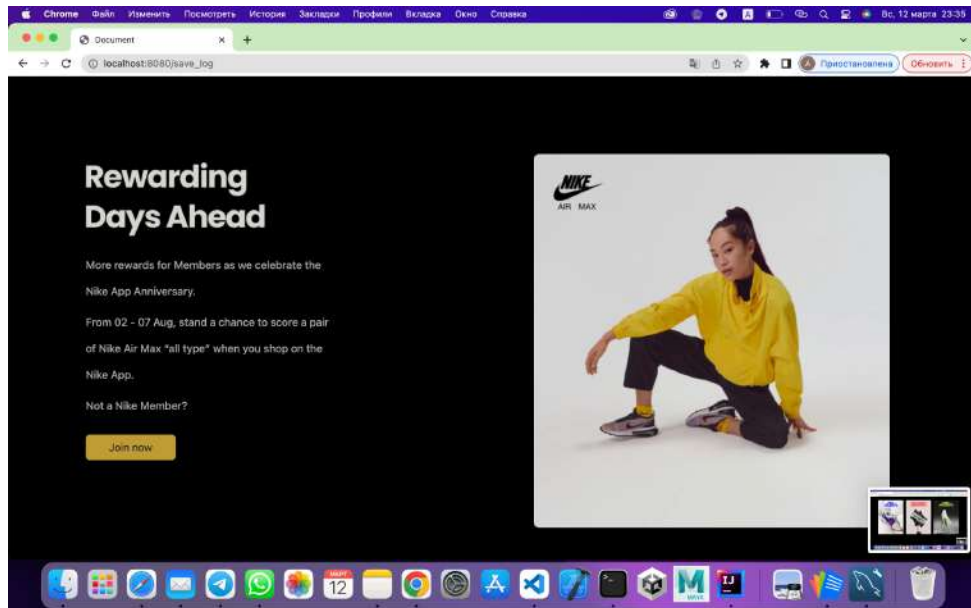

Also, we developed our main page's design and linked it with registration and login pages. Then, we developed a registration table and added name and surname columns and added name and surname text inputs to our registration page.

At the end we improved the registration process and fixed bugs on the page. Now it causes a warning when the email is not unique and if in the table there is the same email. We changed the column's setting to a unique email address.

---

---

## PROCEDURE

1. Opening new tables in Database
2. Filling the Database
3. Writing the html and css code of main page
4. Improving the Registration part

## RESULTS

We have finished creating all the required tables in the database . In addition , make the user interface of the main page where information about products is shown by utilizing the CSS and HTML . Some product's data is added to the database .
